NeRF [ECCV 2020]

Gaussian Splatting [SIGGRAPH 2023]

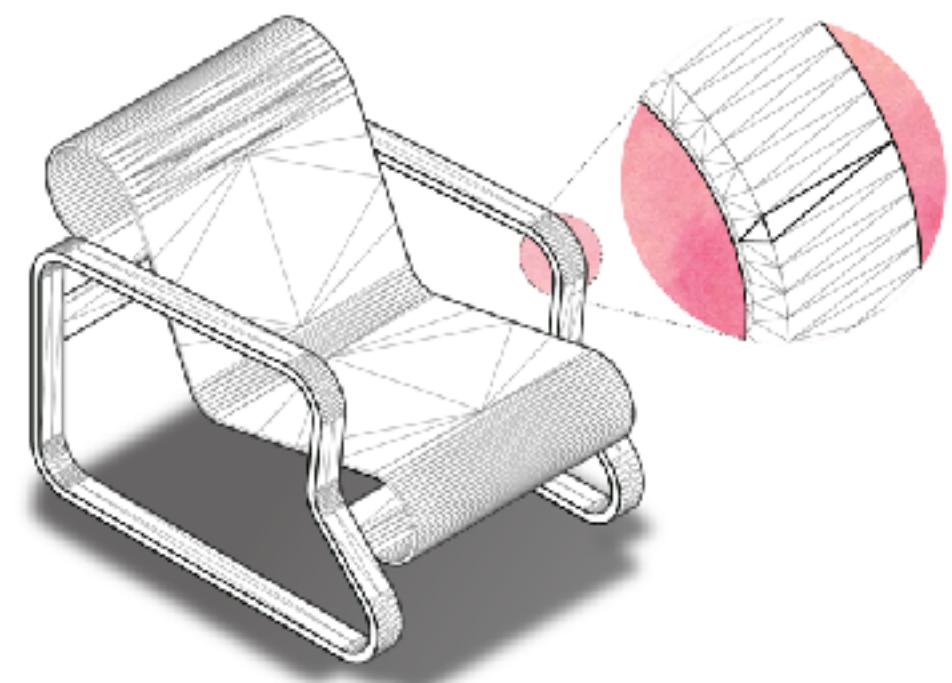

# Meshes are the industry standard

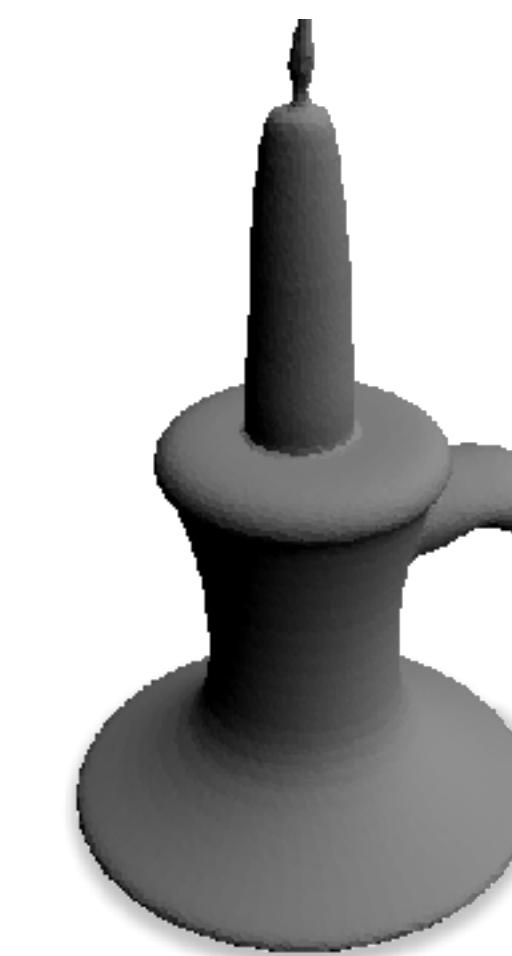

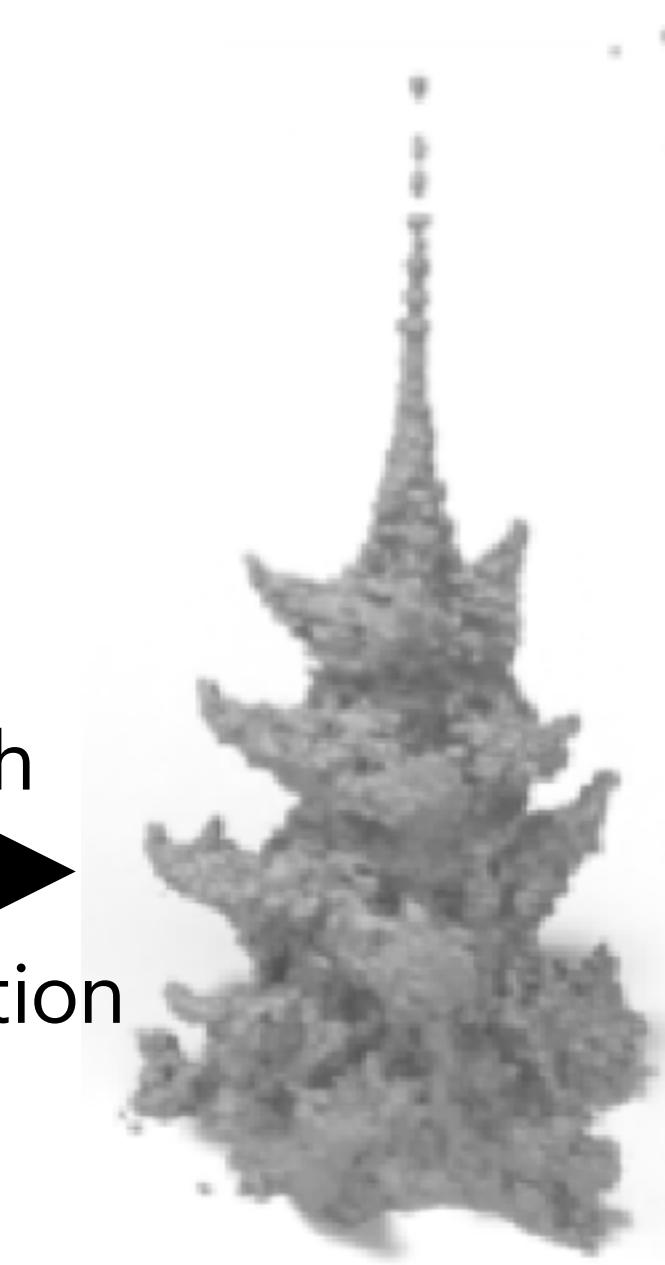

Entire graphics pipeline is built around meshes!

# 3D content creation by editing meshes!

(as opposed to NeRFs) Because:

Mesh  
Extraction

**Meshes accurately represent  
sharp features topology**

**Need to convert to a mesh  
NeRF → Mesh isn't easy**

**Provides user/artist control**

Text2Mesh [CVPR 2022]

# Where do we get the 3D datasets from?

Deep learning models are data-hungry!

**Supervised or unsupervised datasets**

**Large unsupervised datasets still requires curation!**

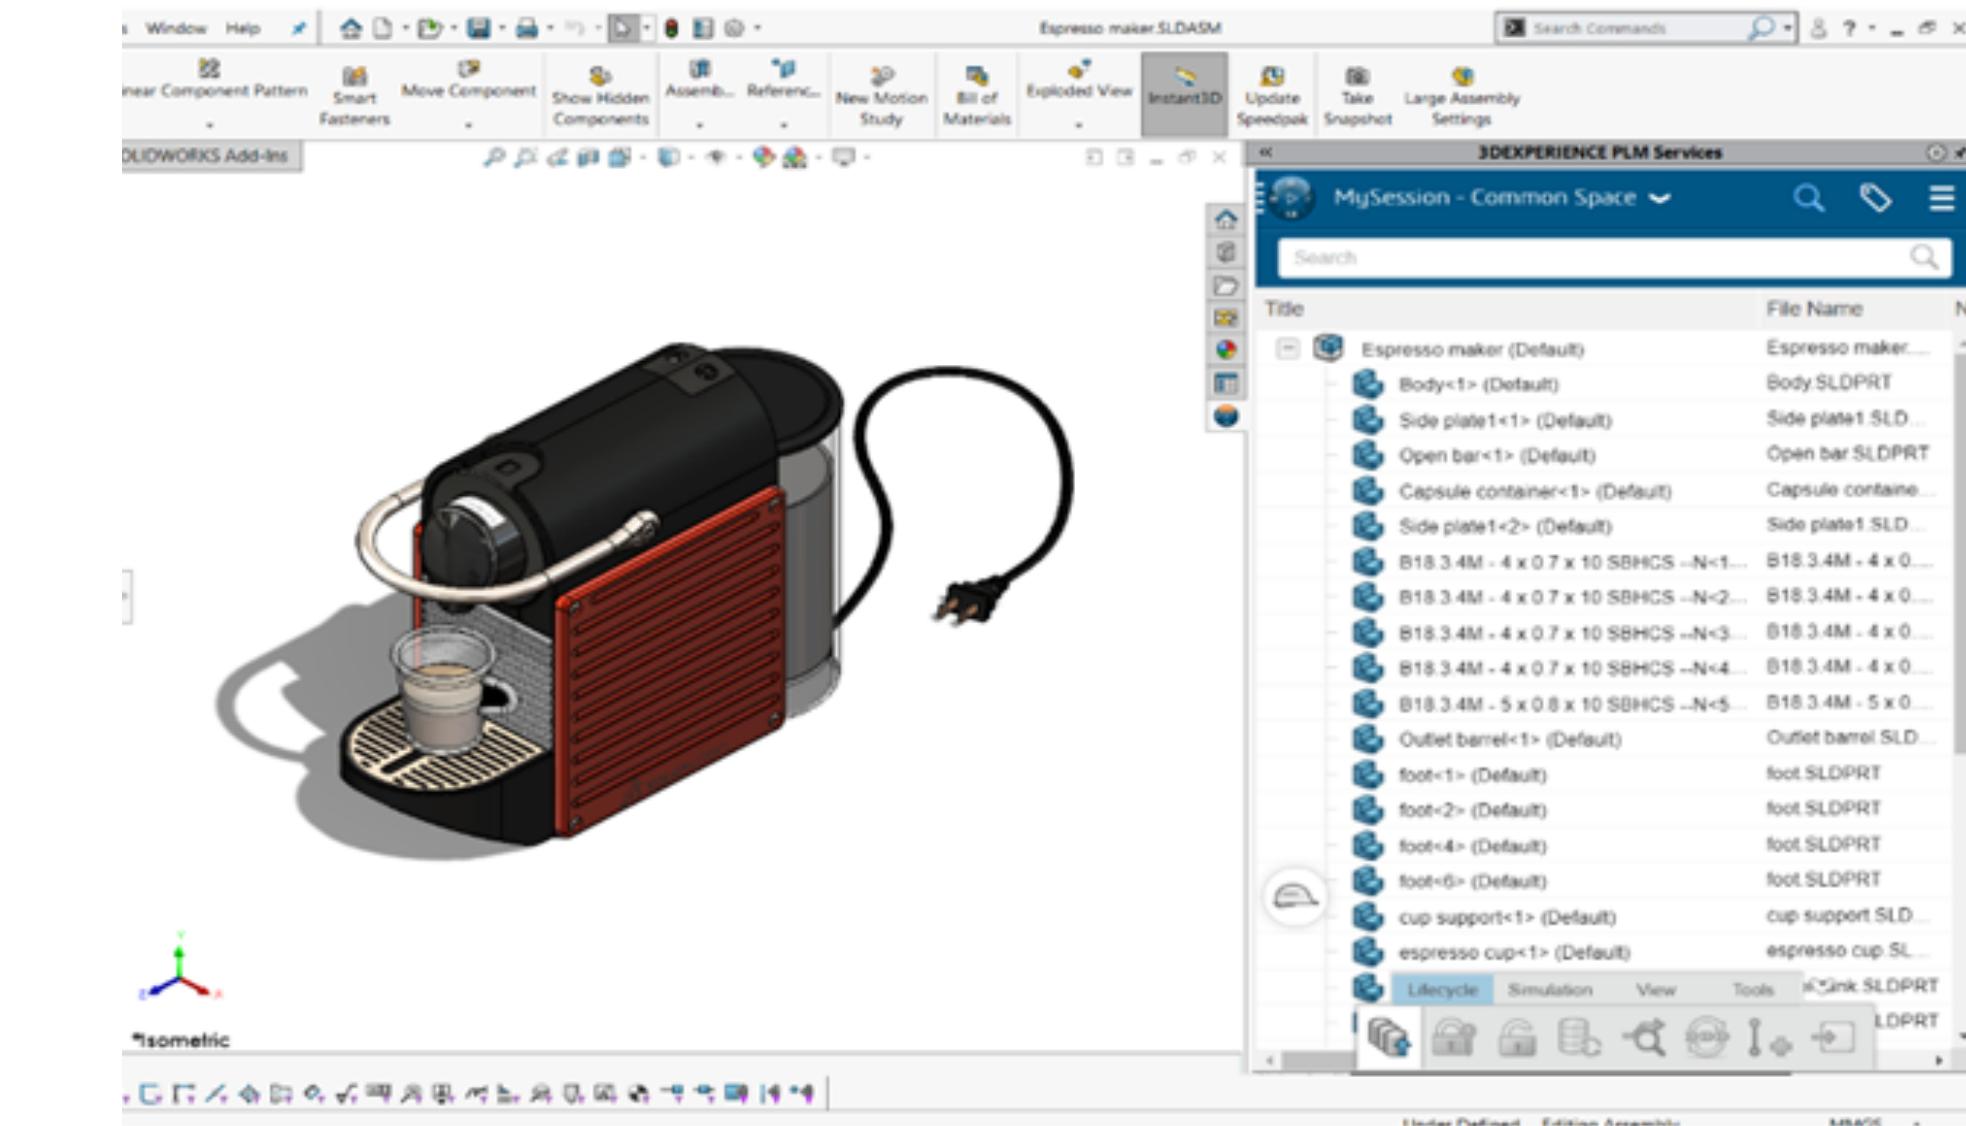

**Difficult to obtain big 3D training datasets**

# Difficult to create 3D Data

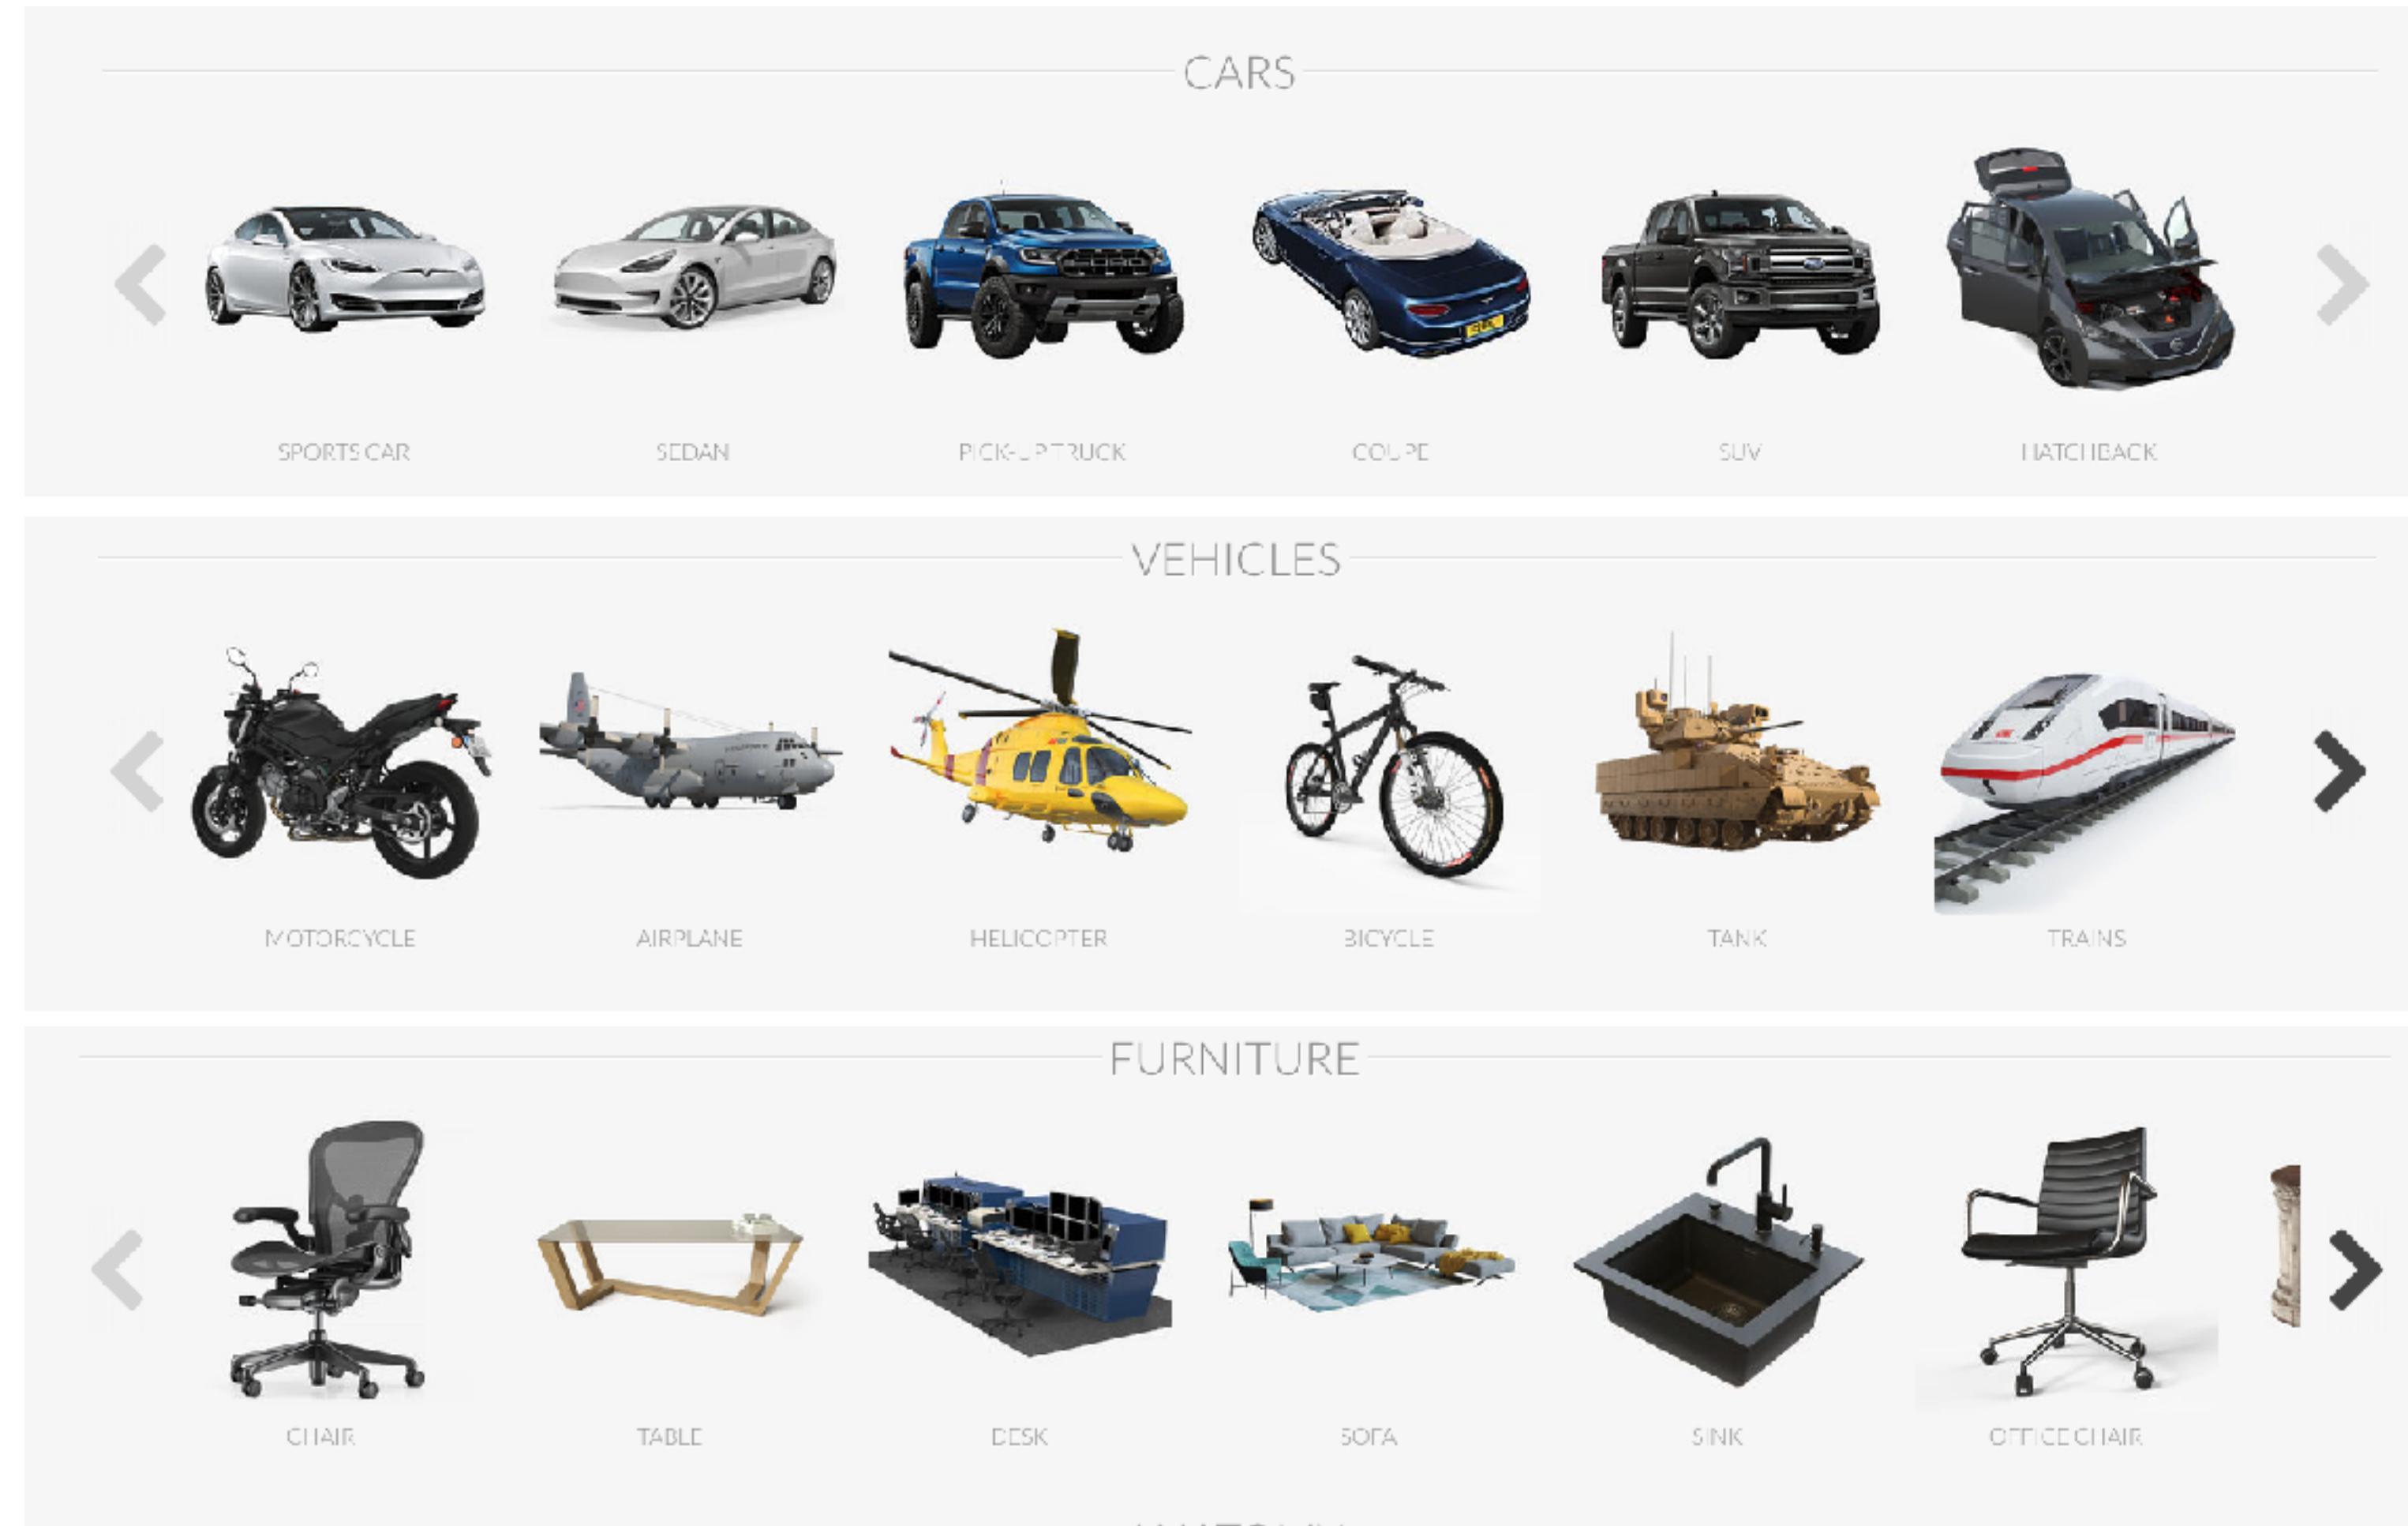

Blender

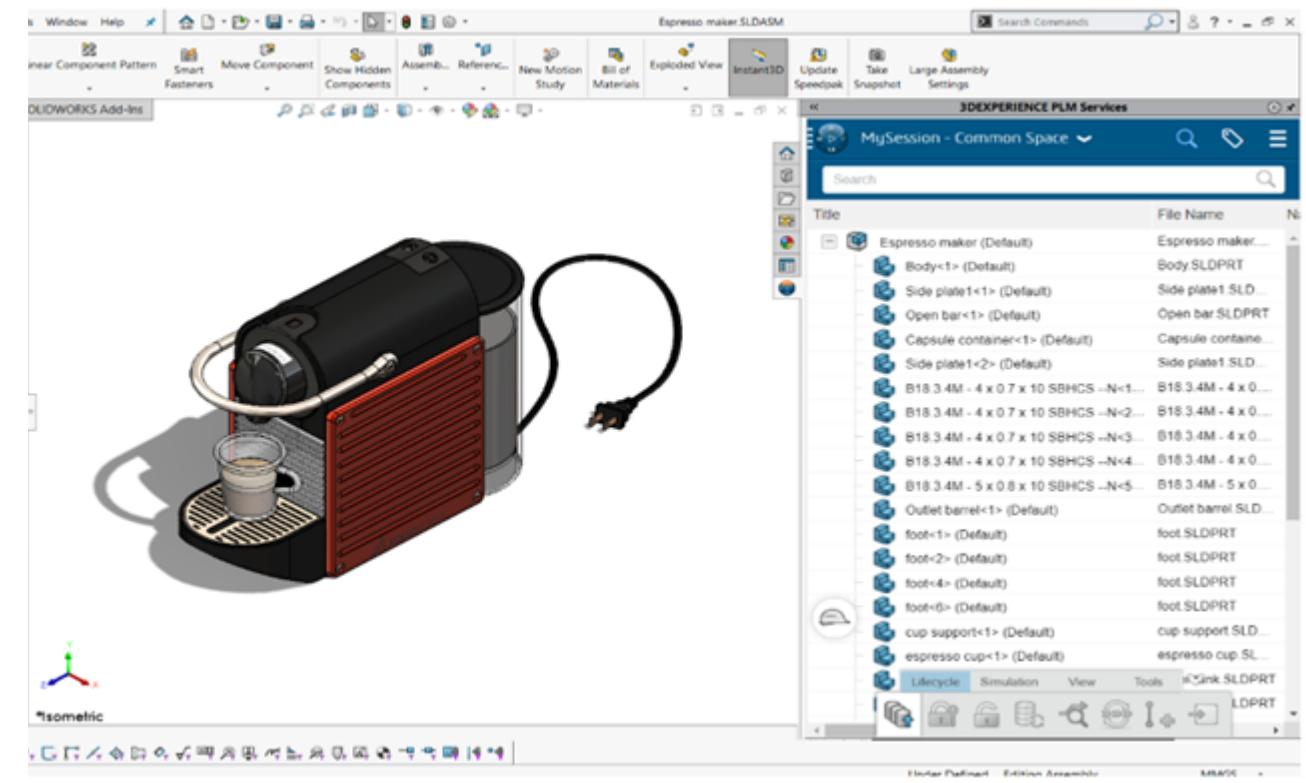

SolidWorks

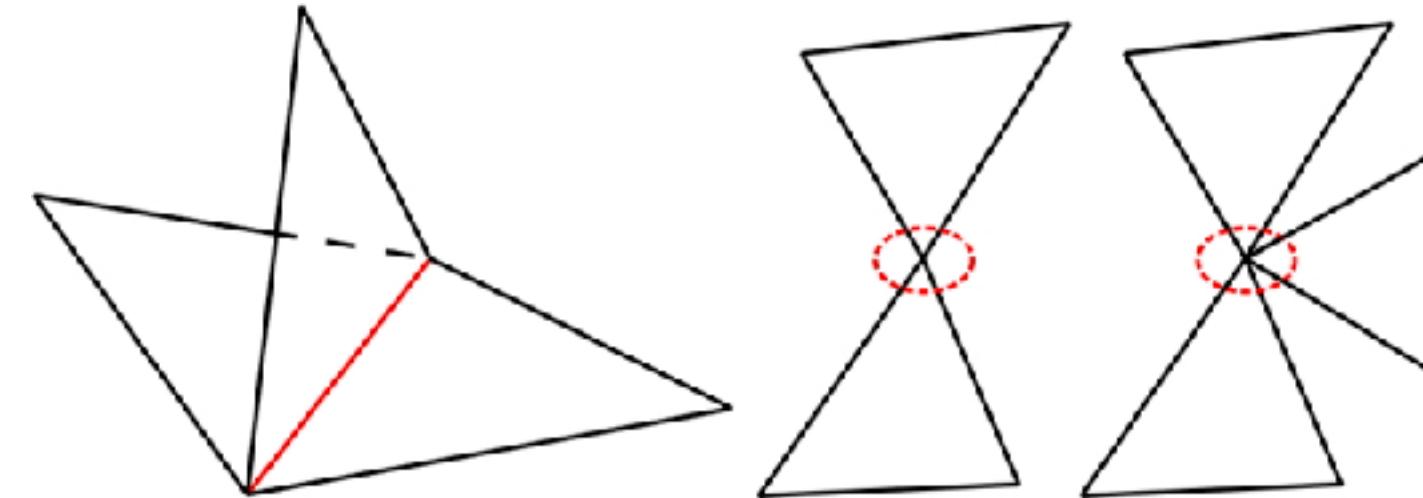

# High visual quality ≠ compatible for geometric computation

# Big 3D data challenges

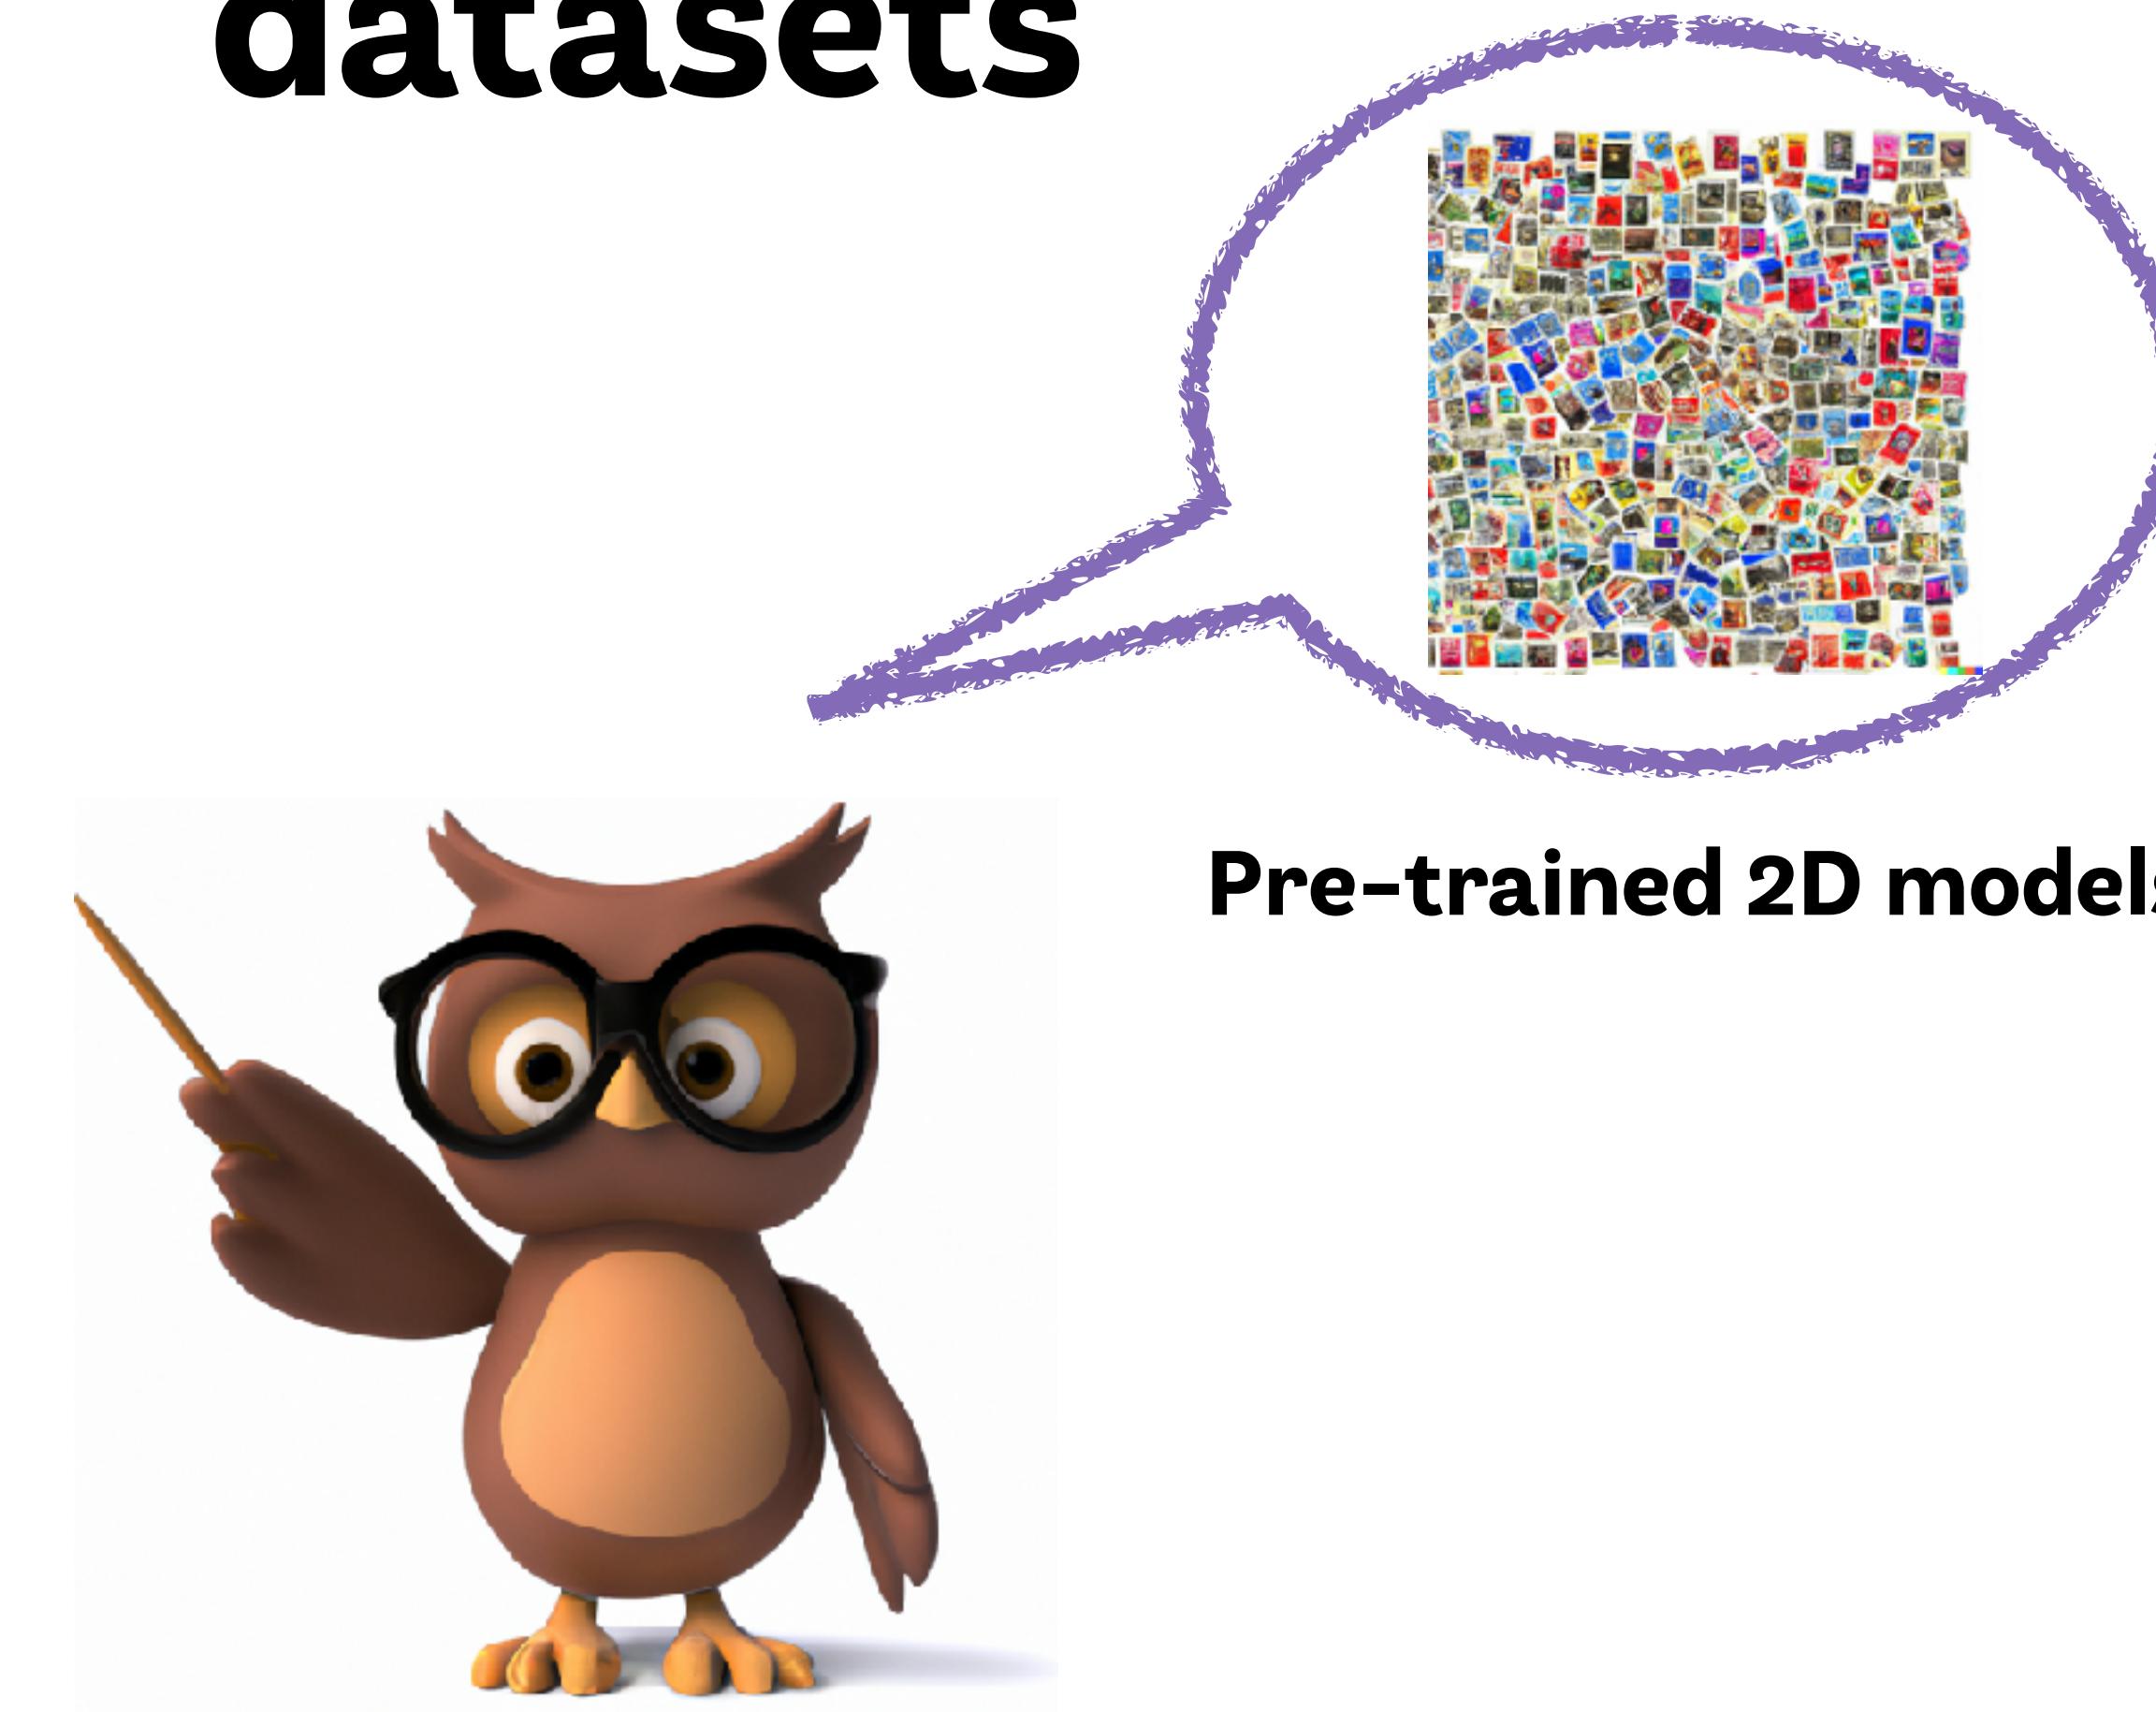

Time-consuming to create

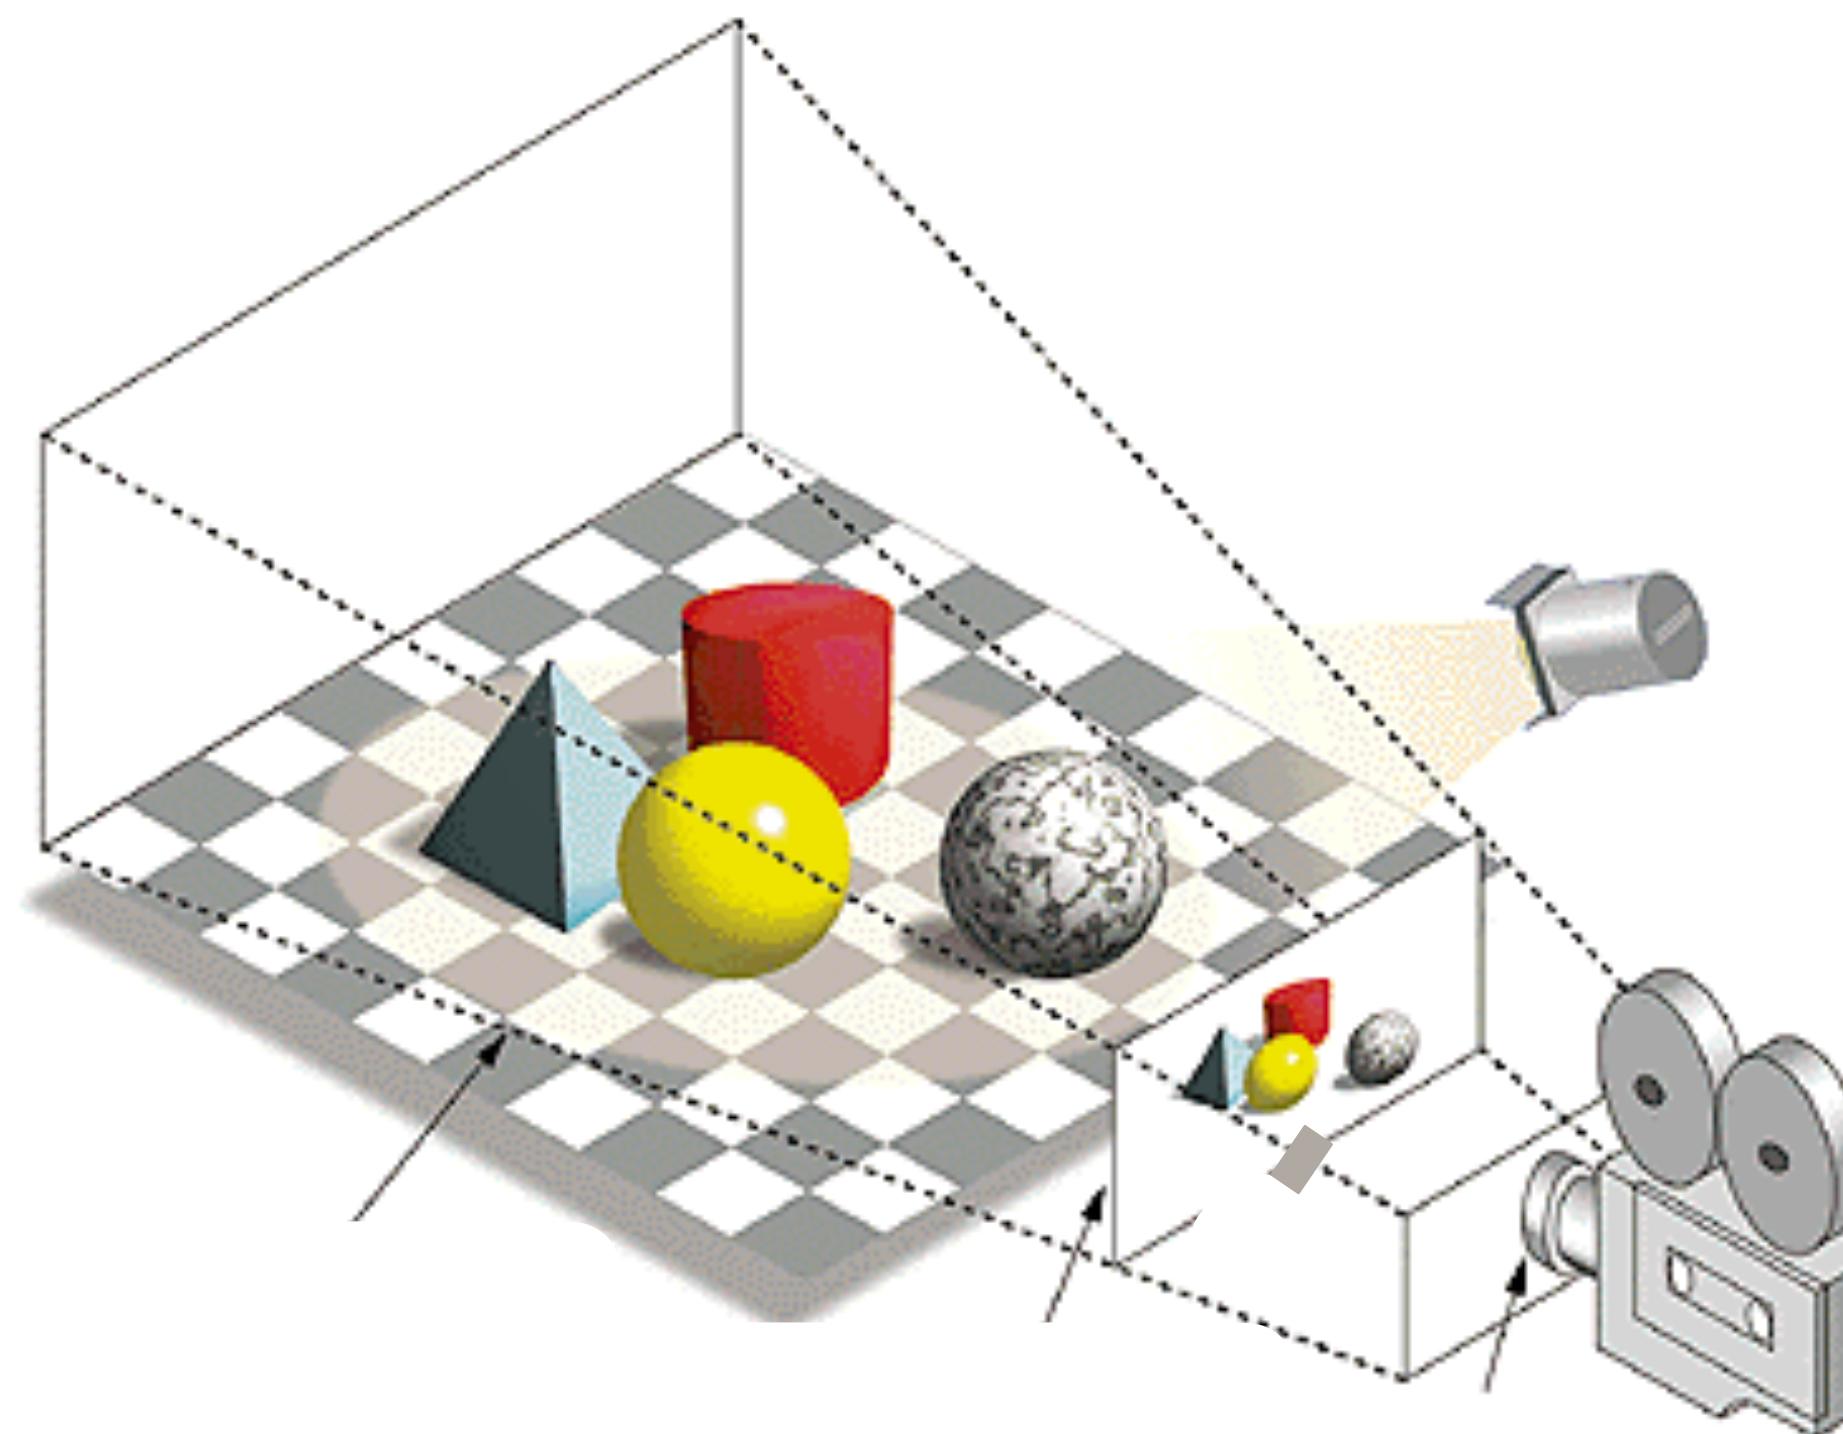

High-bar for geometric computation

# Moving beyond relying on large 3D datasets

**Pre-trained 2D models**

# Leveraging pre-trained 2D models to learn in 3D

**Connecting 2D to 3D via rendering**

**Take advantage of big 2D datasets**

**Images are how we perceive the 3D shape**

# Identity-preserving stylization of mesh geometry

**Input 3D object**

**Deformed**

# Identity-preserving stylization of mesh geometry

**Gain more control over the generation process**

*How: reformulate and restrict the underlying deformation procedure*

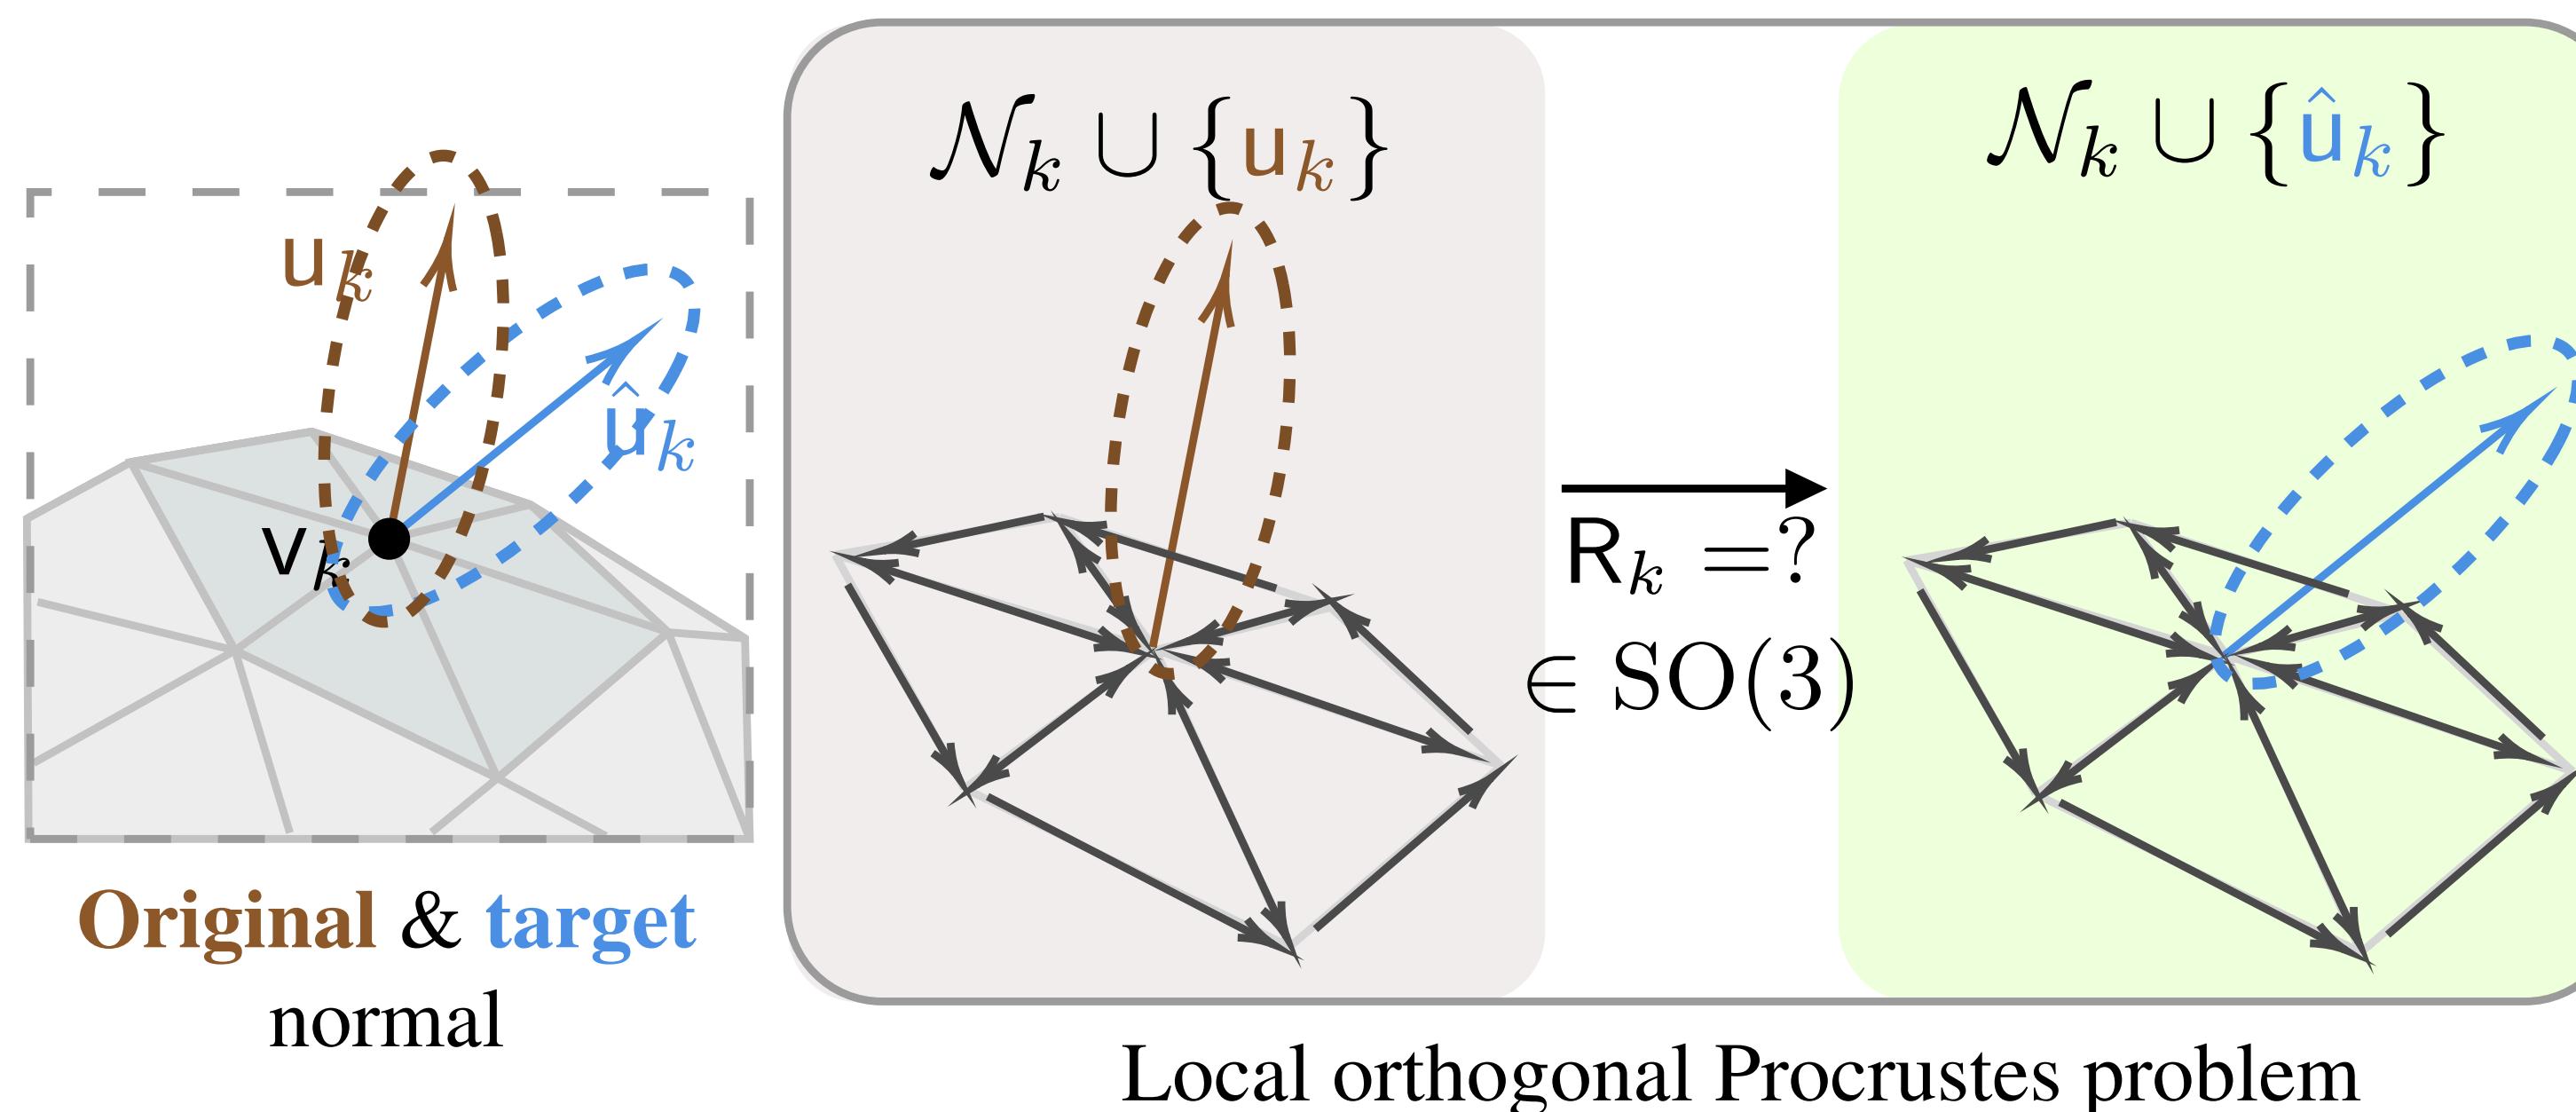

**Input 3D object**

**Deformed**

# One idea: use normals

Use normals to represent the space of deformations

**Recover a “best fit rotation” to  
the target normal via a local  
Procrustes solve**

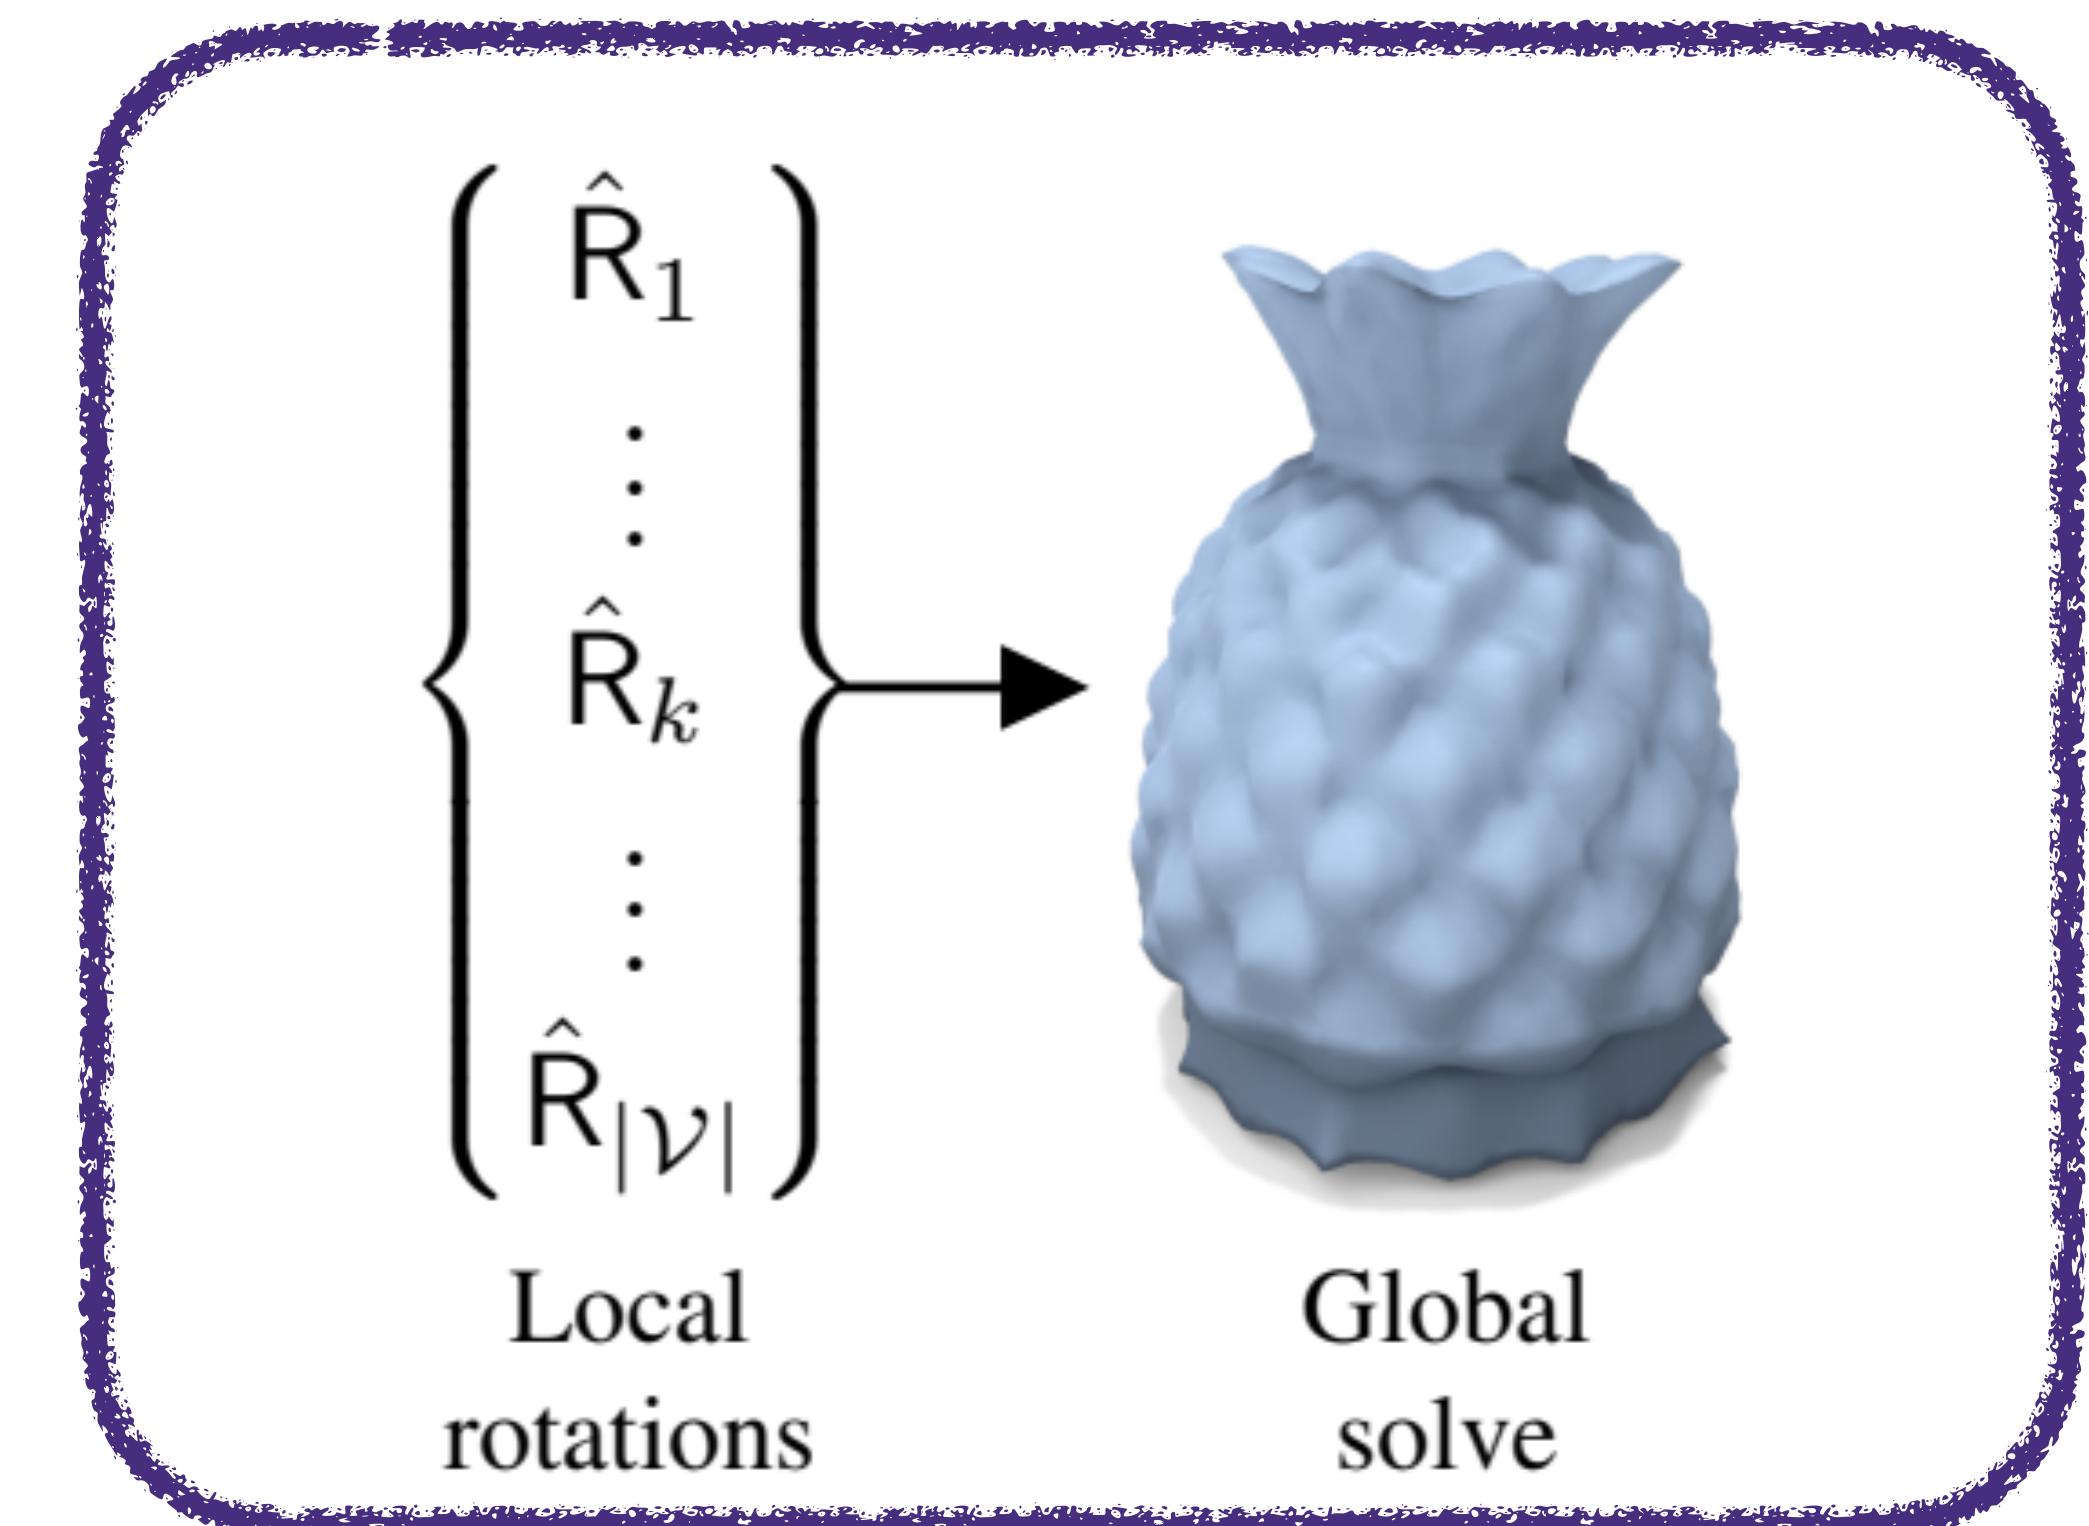

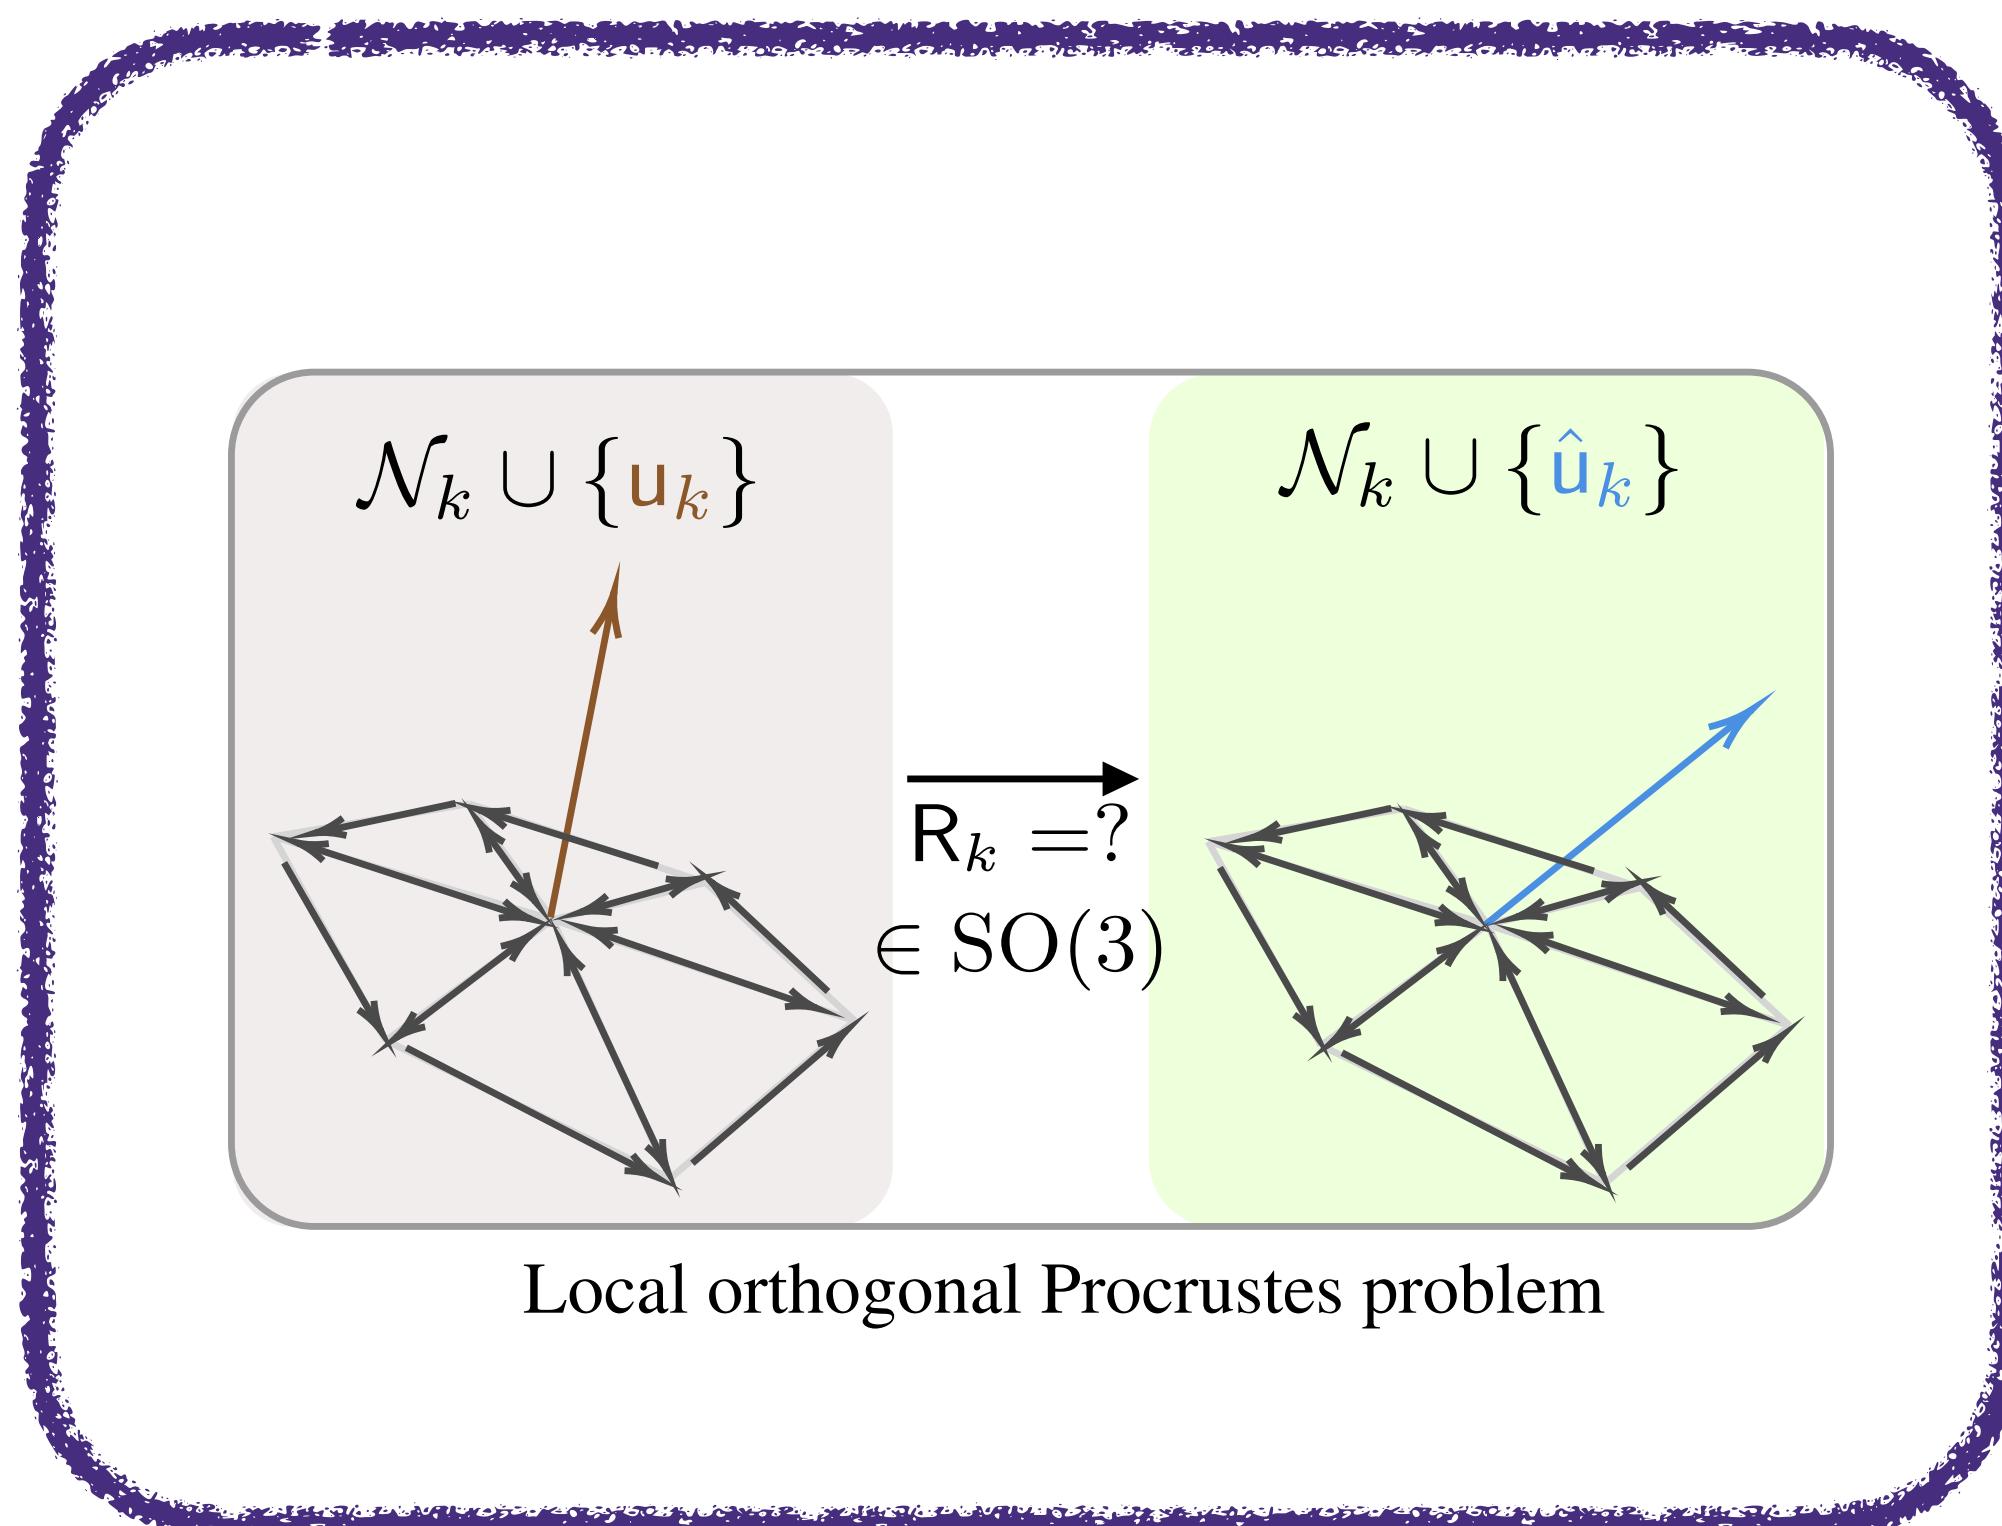

**Lambda controls strength of  
deformation**

*More restrictive than Jacobians,  
but preserves shape identity while still expressive*

# dARAP: Differentiable ARAP

a differentiable one-step adaptation of classical As-Rigid-As-Possible deformation

*All runs in a single forward pass!*

Local: solve for optimal rotation  
based on target normal

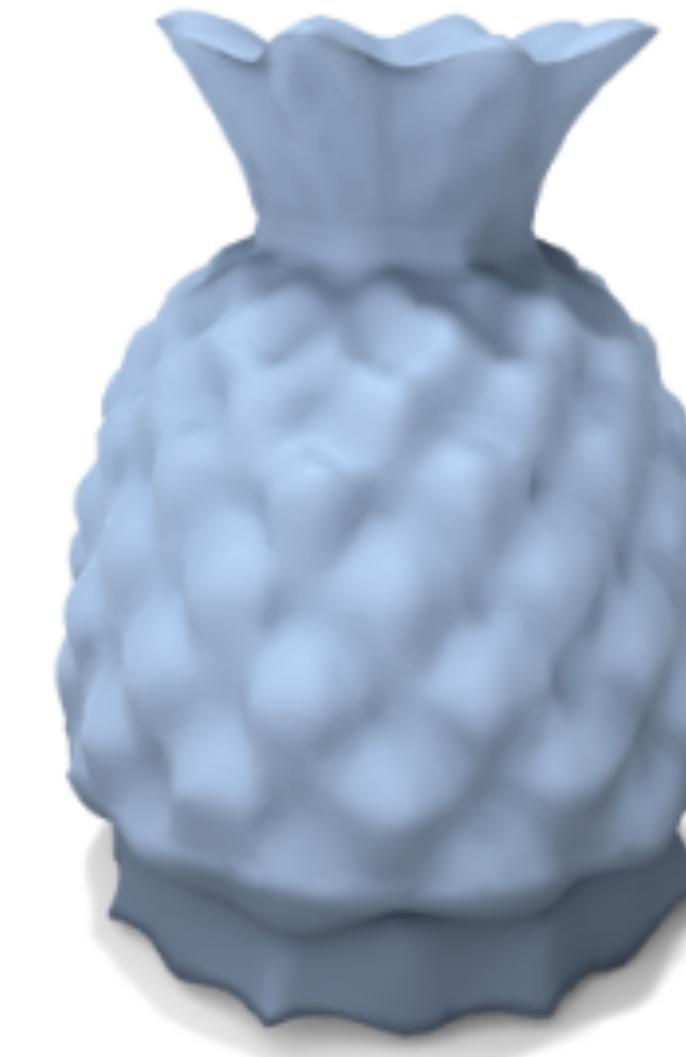

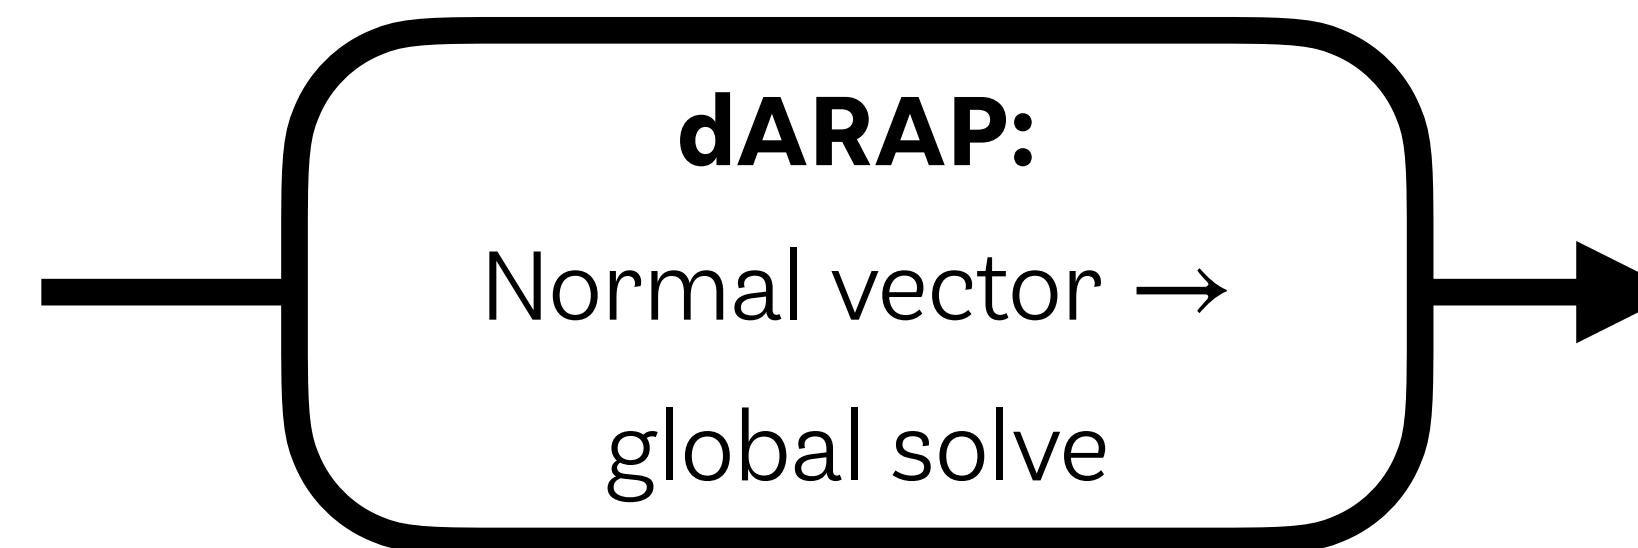

Global: solve for overall deformation  
from rotations

# Gist of our approach

**Optimize a normal vector per vertex**

**How to supervise?**

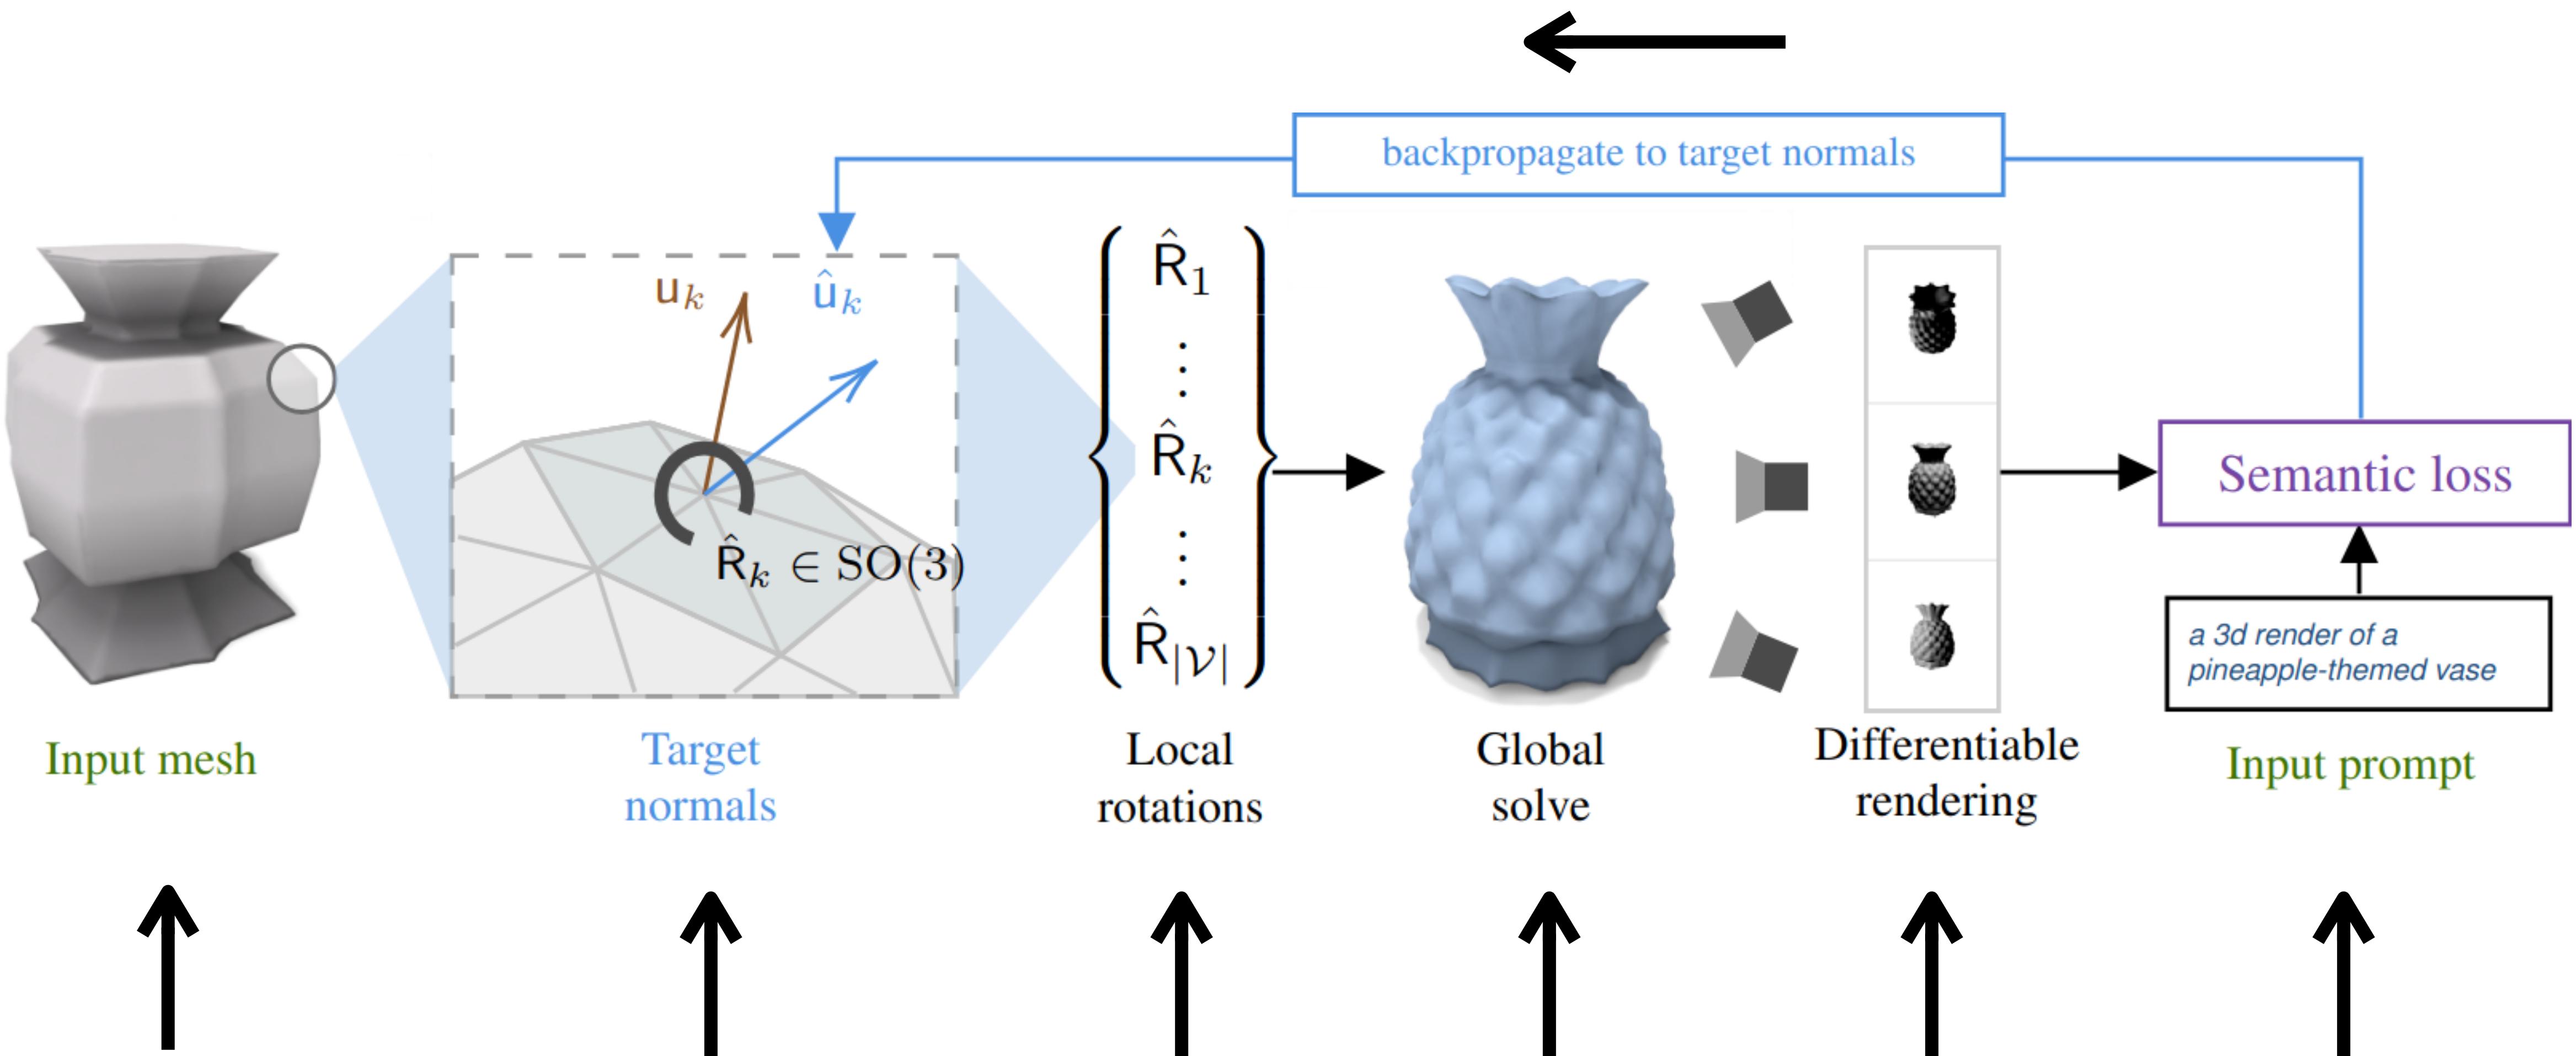

- ***no 3D dataset!***
- ***no pairs of text & 3D styles***

*a pineapple-themed vase*

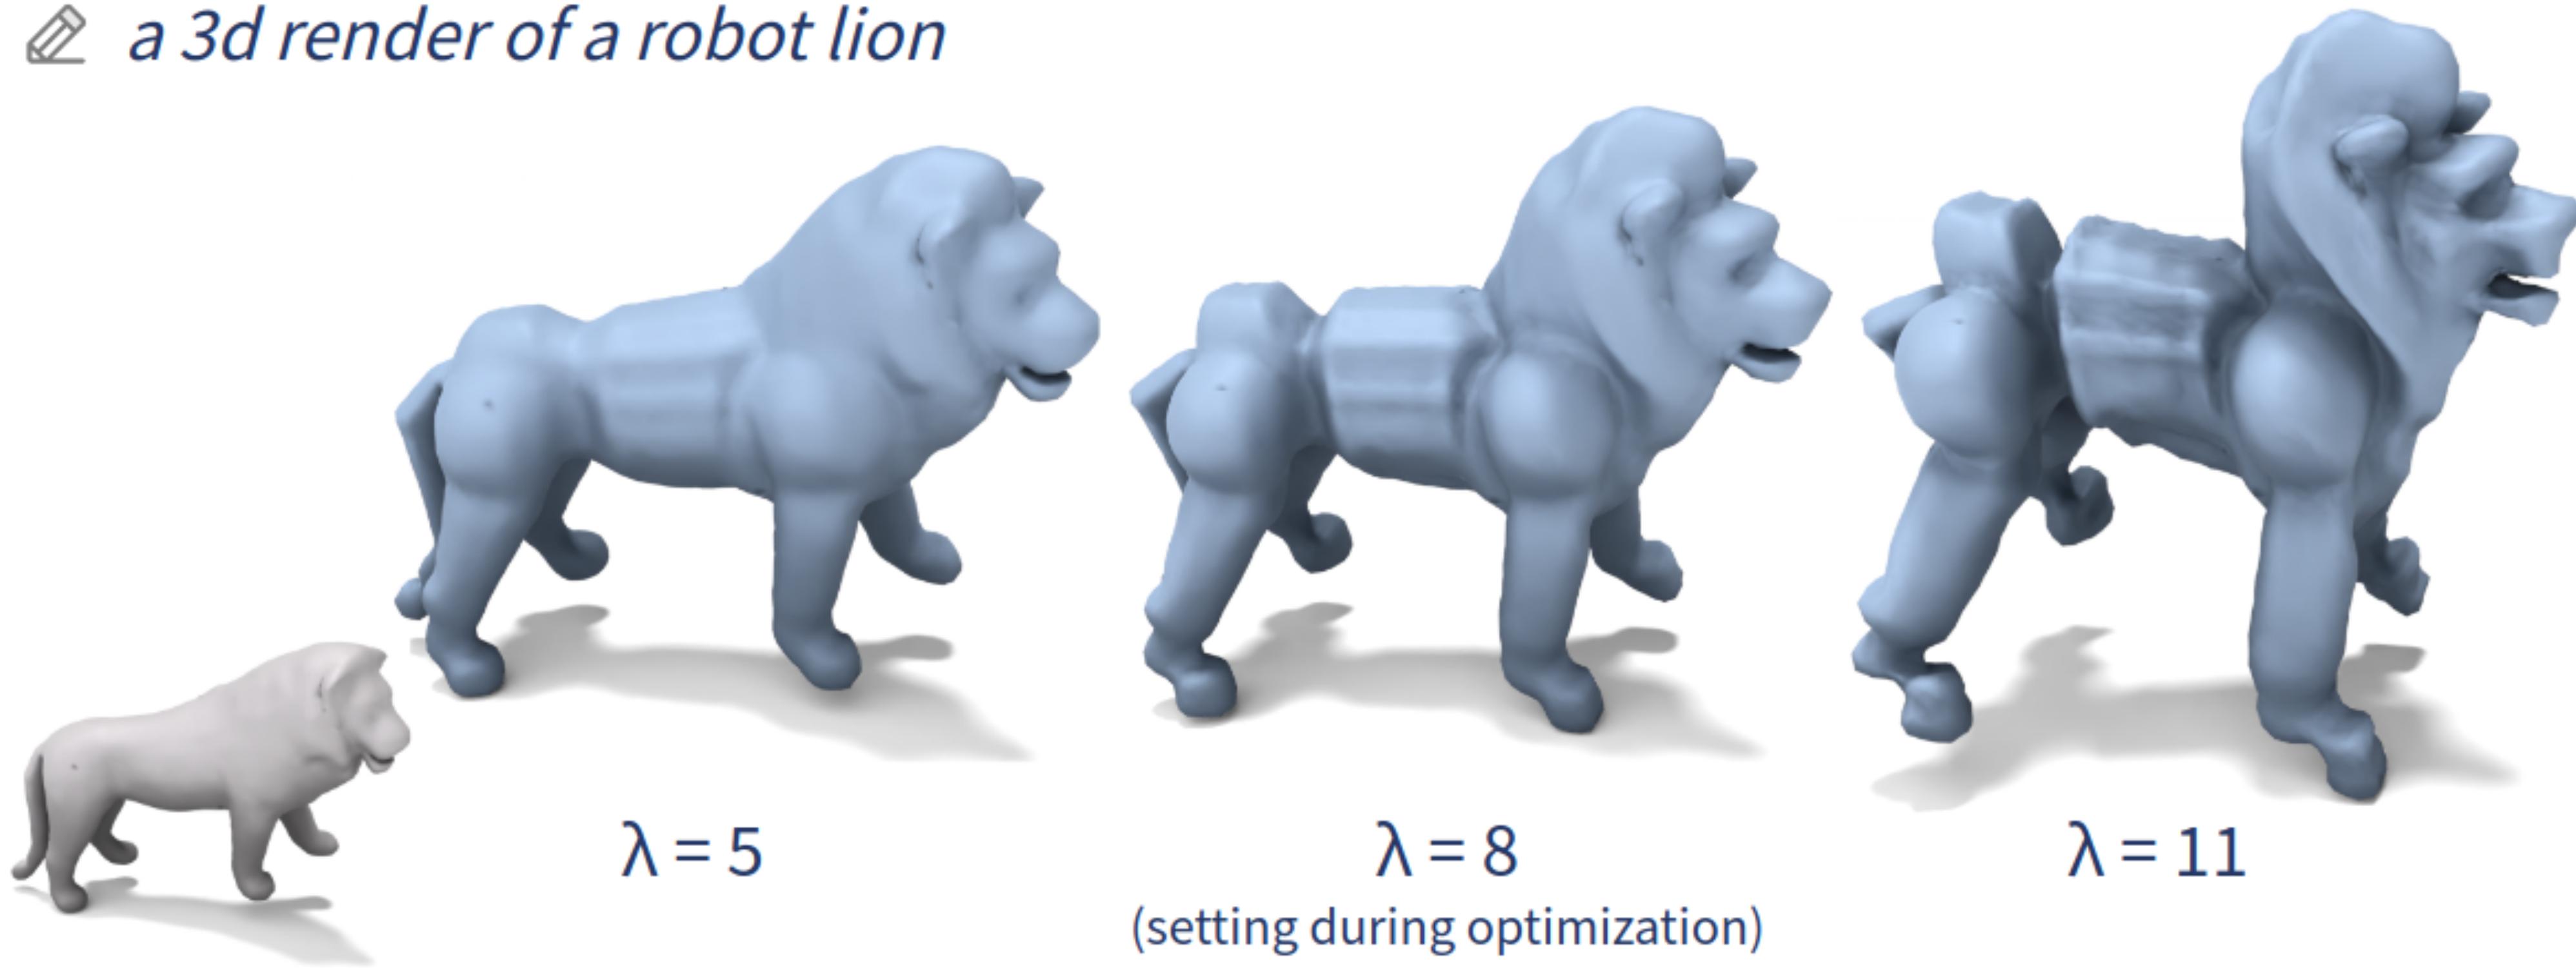

**Key idea: Differentiable render & supervise with a visual loss**

# Summary of Neural Deformations

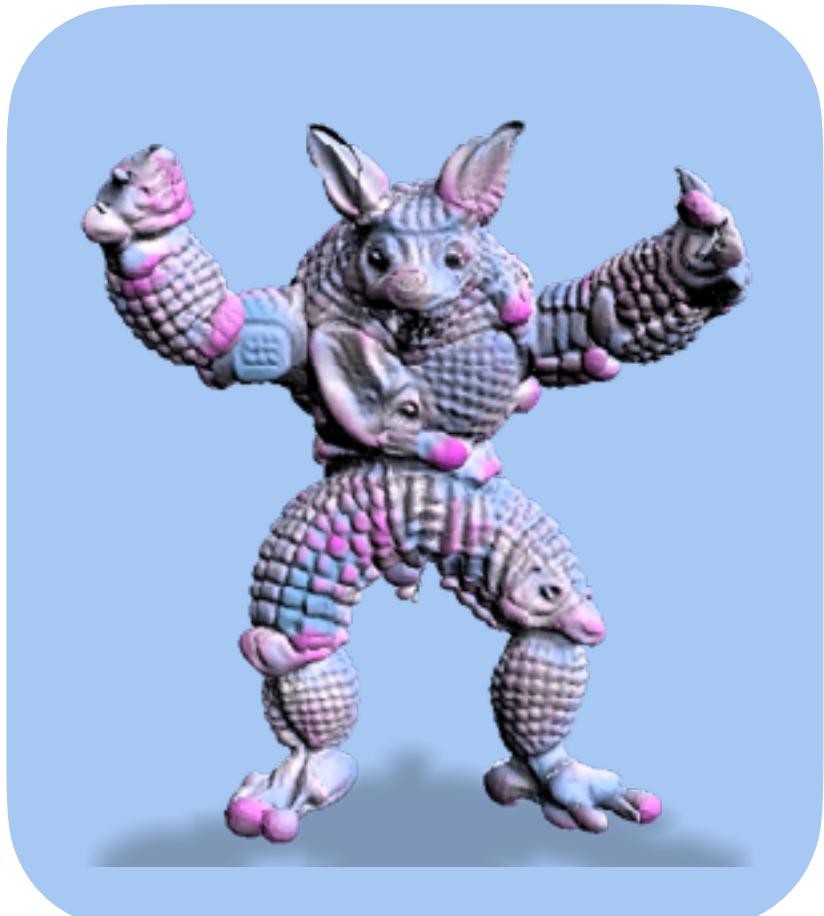

- We can achieve highly expressive text-specified deformations
- Deformations via Jacobians are highly flexible (double edged sword)
- Deformations via surface normal is more restrictive, preserving the identity of the input
